

Supplementary Table 2. Multivariate model including 5 days mean CVP, 5 days mean leukocytes and SAPS II for the risk of worsening renal function

Variable	OR (95% CI)
5 days mean CVP (per 1mm Hg increase)	2 (1.12–4.33)
5 days mean leukocytes (per 1G/L increase)	1.4 (1.10–1.82)
SAPS II (per 1 increase)	1.1 (0.92–1.14)

CVP: central venous pressure; SAPS: Simplified Acute Physiology Score; OR: odds ratio; CI: confidence interval.
